

A. Backtest audit

A repository of forecast backtests silently uses revised data. One written rule. The agent repairs every script.

Outcome

Built and piloted. Opus 4.7 and GPT-5.5 solve it at 8, 24 and 48 scripts. Sonnet 5 and Haiku 4.5 fail.

B. Exactly-once ingest

An ingest service on an object store must stay correct under every crash, redelivery and zombie-writer schedule.

Outcome

Built and verified on 27,710 schedules. Judged likely to be solved by the top models. Parked.

C. Exact-truth forecasting

Forecast a simulated league from ball-by-ball history. Forecasts are graded against the true probabilities.

Outcome

Chosen, built, gated and piloted. Opus 4.7 0 of 5, GPT-5.5 0 of 5 under a rule committed first.

Rejected on paper

A port of a live Kaggle competition. Stock and candlestick prediction. Live sports forecasting. Recovery of a sealed binary format. A query cost budget. Machine-checked proofs.
